

## LakePro Pellets

LakePro Pellets are all-natural bacterial pellets that remove up to 70% of pond sludge. These slow-release pellets sink into the muck and degrade it by stimulating naturally-occurring bacteria and adding sludge-eating cultures.

— **25 Pounds; Bulk** —

# Dosage Instructions

**STORE IN A COOL, DARK PLACE.** LakePro Pellets work best when water temperature is 60°F (17°C) to 130°F (54°C). The warmer the water, the faster the bacteria reproduce and digest sludge.

**INITIAL DOSE:** 10-lb to 25-lb per surface-acre once per month depending on the depth of the muck or the extent of surface debris.

**SUPER DOSE:** For ponds and lakes where they would like to degrade up to 1-foot per month. 50-lb per acre once per month.
